PROGRAM AUTHORITY FOR COMPLEX AI INTEGRATIONS

The Integration Risks Nobody Owns Are the Ones That Destroy Capital

Modern AI and robotics systems are assembled from multiple vendors, platforms, and models. Hardware manufacturers control the robotics. AI providers control the intelligence layers. Integrators assemble the system. But no single party owns the operational outcome.

Without independent governance, capital exposure multiplies across vendor seams — turning promising technology into permanent prototypes.

We are not an implementation vendor. We govern implementation vendors.

THE THREE RISKS WE PREVENT

Capital Exposure

Undefined outcomes allow budgets to burn without measurable progress toward operational readiness.

IP Fragmentation

When multiple vendors contribute to a system, intellectual property fragments across hardware, firmware, models, software layers, and contracts.

Permanent Prototype

Many AI programs demonstrate impressive prototypes but never reach stable production because no written Definition of Done governs the complete system.

THE COGNITIVE STACK

- CM** Control Model — Physical capability: robotics hardware, actuators, motion control
- WM** World Model — Environmental understanding: vision, spatial reasoning, language models
- TM** Task Model — Operational identity: workflows, behavioral standards, service protocols. Must remain client-owned IP.

Agentive Insight governs the seams between CM, WM, and TM.

ENGAGEMENT MODEL

Tier 1 — Integration Exposure Assessment

\$15,000 fixed fee

Executive diagnostic: Integration Exposure Score, vendor seam map, IP ownership analysis, platform dependency evaluation, readiness assessment. Credited toward MAP within 60 days.

Tier 2 — Milestone Alignment Process (MAP)

\$50,000 fixed fee

4-week governance architecture: Definition of Done, vendor accountability, integration validation, IP protection, readiness gates, go/no-go recommendation.

Tier 3 — Program Authority Retainer

\$65,000/month

Ongoing governance: vendor coordination, change control, risk management, milestone validation, behavior stability, operational oversight.

Travel and project-related expenses billed separately at cost.

CREDIBILITY: THE 40-YEAR INTEGRATION ARC

- 1988** Pioneered unified fuel pump, retail POS, and car wash integration — one of the earliest multi-vendor convergence models.
- 1989** Established installation partnership with IBM. Deployed and supported systems for police, fire, and education networks across Kern County, California.
- Patent** Inventor — US Patent 11,806,881 B1: AI system for automatic tracking and behavior control of animatronic characters.

Industries: Healthcare • Security Integration • Manufacturing • Insurance • Government • Entertainment • Commercial Robotics

If the project is the investment, we are the insurance.
